1 Line Graphs

Let's start out by loading the seaborn package

[18]:
```
import seaborn as sns
import numpy as np
```

In this practice we will be using the `dots` dataset. This is also a dataset that contains information about brain activations over time. Let's load and preview the data.

[19]:
```
dots = sns.load_dataset("dots")
dots.head()
```

[19]:

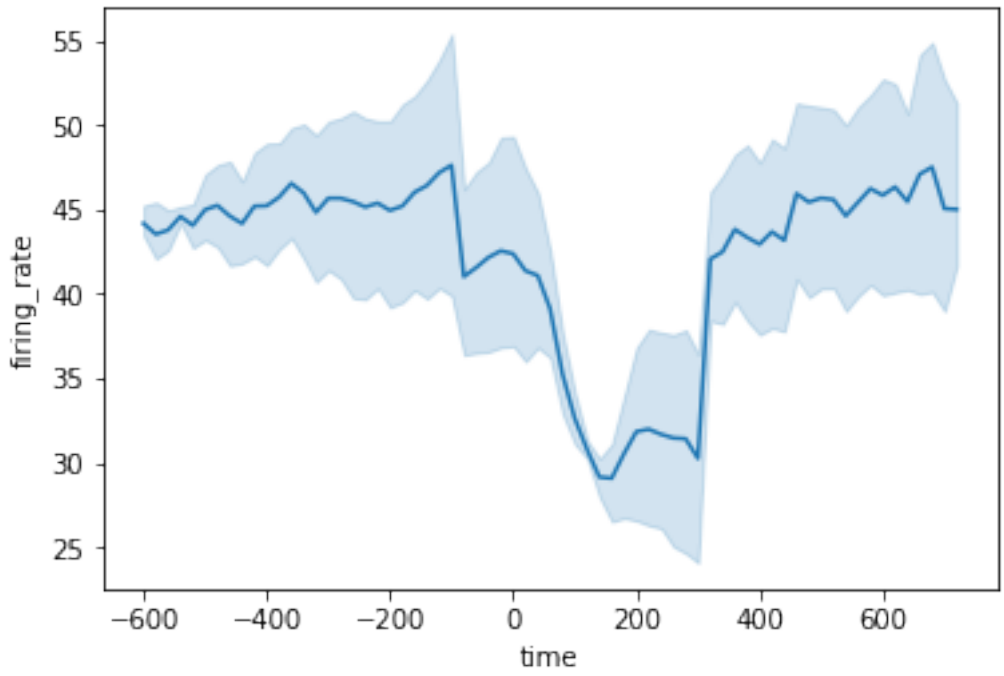
	align	choice	time	coherence	firing_rate
0	dots	T1	-80	0.0	33.189967
1	dots	T1	-80	3.2	31.691726
2	dots	T1	-80	6.4	34.279840
3	dots	T1	-80	12.8	32.631874
4	dots	T1	-80	25.6	35.060487

This dataset is a little more complicated, and to be honest I am not even sure what each column means exactly. But, this is not important for using this data to practice plotting line graphs. All we need to know is that the `align` column contains two values: `dots` and `sacc`, and the `choice` column also contains two values: `T1` and `T2`.

First, let's just get a sense of our base data using a line plot of `firing_rate` vs. `time`. Think hard about which variable should go on which axis!

[20]:
```
# plot time vs firing_rate
sns.lineplot(x='time', y='firing_rate', data=dots)
```

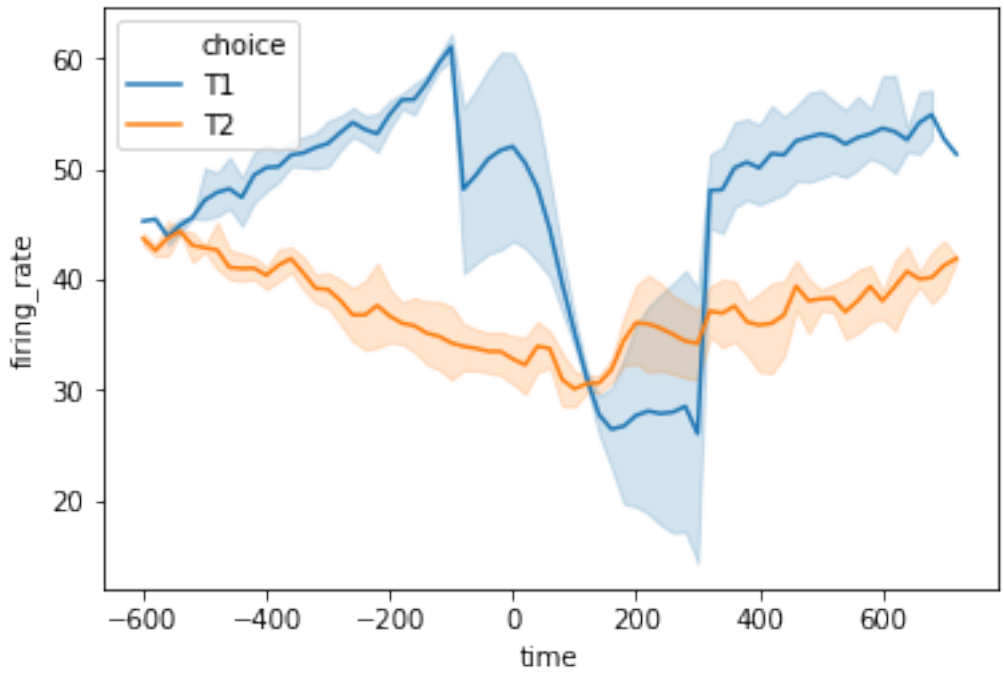
[20]:
```
<matplotlib.axes._subplots.AxesSubplot at 0x1a1aba8198>
```



Now, separate your plot by the `choice` column using color.

[21]:
```
# plot time vs firing_rate separated by choice
sns.lineplot(x='time', y='firing_rate', hue = "choice", data=dots)
```

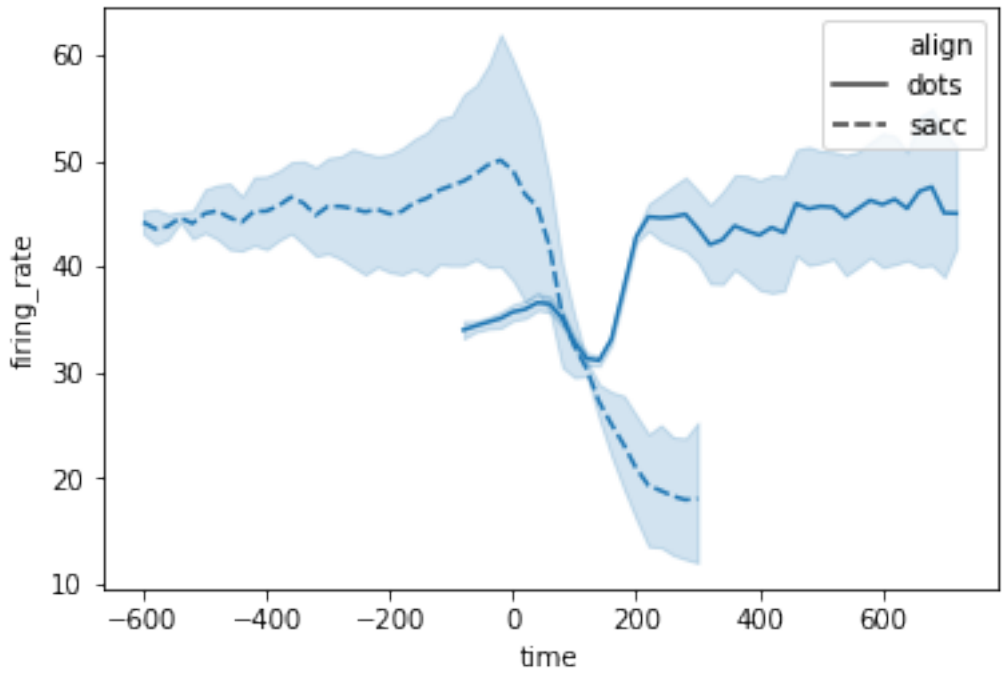
[21]:
```
<matplotlib.axes._subplots.AxesSubplot at 0x1a1ad8c198>
```



Next, separate your plot by the `align` column using line style.

[24]:
```
# plot time vs firing_rate separated by align
sns.lineplot(x='time', y='firing_rate', style = "align" ,data=dots)
```

[24]:
```
<matplotlib.axes._subplots.AxesSubplot at 0x1a1afe3390>
```



Lastly, combine these two factors to get a plot separated by both `choice` (color) and `align` (style). How many lines do you expect in the resulting graph?

[25]:
```
# plot time vs firing_rate separated by choice and align
sns.lineplot(x='time', y='firing_rate', hue = "choice", style = "align"␣
↪,data=dots)
```

[25]:
```
<matplotlib.axes._subplots.AxesSubplot at 0x1a1b1826d8>
```
