## KEY\_Practice17\_Pandas-Subsetting-II

November 15, 2019

## 1 Practice: Subsetting Pandas DataFrames II

For this practice, let's use the iris dataset:

```
[22]: # import the pandas package
import pandas as pd
# set the path
path = 'https://raw.githubusercontent.com/GWC-DCMB/ClubCurriculum/master/'
# this is where the file is located
filename = path + 'SampleData/iris.csv'
# load the iris dataset into a DataFrame
iris = pd.read_csv(filename)
```

Take a look at the dataset:

```
[23]: # take a look at the beginning iris.head()
```

```
[23]:
        sepal_length sepal_width petal_length petal_width species
                 5.1
                              3.5
                                             1.4
                                                          0.2 setosa
                 4.9
                              3.0
                                             1.4
                                                          0.2 setosa
      1
      2
                 4.7
                              3.2
                                             1.3
                                                          0.2 setosa
                                                          0.2 setosa
      3
                 4.6
                              3.1
                                             1.5
                 5.0
                              3.6
                                             1.4
                                                          0.2 setosa
```

```
[24]: # subset the first 5 rows from iris
# save it to a variable called subset1
subset1 = iris.iloc[:5]
```

```
[25]: # subset a few columns from the subset1 dataframe
    # save it to a variable called subset 2
    columns = ['sepal_length', 'sepal_width']
    subset2 = subset1[columns]
```

Let's try subsetting both rows and columns at the same time!

```
[26]: # create a new subset from iris that's identical to subset2
      # but write only one line of code
      # save it to a variable called subset3
      subset3 = iris.iloc[:5][['sepal_length', 'sepal_width']]
[27]: # check your work -- how does subset2 compare to subset3?
      subset2 == subset3
[27]:
        sepal_length sepal_width
                True
                              True
                 True
                              True
      1
      2
                True
                              True
                 True
                              True
                 True
                              True
      4
[28]: # subset rows 20 through 30 and columns petal_length & petal width
      # write only one line of code
      iris.iloc[20:31][['petal_length', 'petal_width']]
[28]:
          petal_length petal_width
                   1.7
                                0.2
      20
      21
                   1.5
                                0.4
                   1.0
                                0.2
     22
      23
                   1.7
                                0.5
      24
                   1.9
                                0.2
     25
                   1.6
                                0.2
     26
                   1.6
                                0.4
                   1.5
                                0.2
     27
                                0.2
      28
                   1.4
     29
                   1.6
                                0.2
                                0.2
     30
                   1.6
     Now let's subset using query:
[29]: # subset rows where the species is not setosa
      iris.query('species != "setosa"')
           sepal_length sepal_width petal_length petal_width
[29]:
                                                                    species
     50
                    7.0
                                 3.2
                                               4.7
                                                            1.4 versicolor
     51
                    6.4
                                 3.2
                                               4.5
                                                            1.5 versicolor
                    6.9
                                 3.1
                                               4.9
                                                            1.5 versicolor
      52
                                 2.3
      53
                    5.5
                                               4.0
                                                            1.3 versicolor
                                               4.6
      54
                   6.5
                                 2.8
                                                            1.5 versicolor
      . .
                                 3.0
                                               5.2
                                                            2.3 virginica
